Learning Path 03: Management and Governance

Learning path 03—outline

You will learn the following concepts:

- 1 Cost management**
 - Cost and pricing calculators ✓
 - Cost management and tags
- 2 Governance and compliance**
 - Blueprints, policies, and resource locks ✓
 - Service Trust portal
- 3 Resource deployment tools**
 - Portal, PowerShell, CLI, and others ✓
 - Azure Arc and Azure Resource Manager
- 4 Monitoring tools**
 - Azure Advisor, Azure Service Health, and Azure Monitor ✓

Cost management

Factors affecting costs (part 1)

These are some of the factors affecting costs:

1) Resource type	2) Consumption	3) Maintenance
Costs are resource-specific, so the usage that a meter tracks and the number of meters associated with a resource, depend on the resource type.	With a pay-as-you-go model, consumption is one of the biggest drivers of costs.	Monitoring your Azure footprint and maintaining your environment can help you identify and mitigate costs that aren't necessary, such as shutting down underused virtual machines.

Cosmos DB
→ MI SQL

Azure Advisor
OE

Factors affecting costs (part 2)

These are some of the factors affecting costs:

4) Geography	5) Network traffic	6) Subscription
The same resource type can cost different amounts depending on the geographic area, which has an impact on Azure costs.	While some inbound data transfers are free, the cost for outbound data or data between Azure resources is impacted by billing zones.	The type and configuration of your subscription can also impact your cost. For example, the free trial lets you explore some Azure resources for free.

Explore Azure Marketplace

Azure Marketplace allows customers to find, try, purchase, and provision applications and services from hundreds of leading service providers, which are all certified to run on Azure.

- Open-source container platforms.
- Virtual machine and database images.
- Application build and deployment software.
- Developer tools.
- And much more, with 10,000-plus listings!

Pricing calculator

The **pricing calculator** is a tool that helps you estimate the cost of Azure products. The options that you can configure in the pricing calculator vary between products, but basic configuration options include:

- Region
- Tier
- Billing options
- Support options
- Programs and offers
- Azure dev/test pricing

The screenshot displays the Azure Pricing Calculator interface for Virtual Machines. At the top, the title "Your Estimate" is followed by a summary bar showing "Virtual Machines", a configuration of "1 D2 v3 (2 vCPUs, 8 GB RAM) x 730 Hours (...)", and pricing of "Upfront: USD 0.00" and "Monthly: USD". To the right of the summary bar are four icons: a link, a refresh, a share, and a trash. Below the summary bar is a section titled "Virtual Machines" with a search bar. The configuration is organized into two rows of dropdown menus. The first row includes "REGION:" (West US), "OPERATING SYSTEM:" (Windows), "TYPE:" ((OS Only)), and "TIER:" (Standard). The second row includes "CATEGORY:" (All), "INSTANCE SERIES:" (All), and "INSTANCE:" (D2 v3: 2 vCPUs, 8 GB RAM, 50 GB Temporary storage, USD 0.209/hour). At the bottom, there is a quantity selector showing "Virtual machines" with a value of "1", a multiplier "x", a duration of "730", and a unit of "Hours".

Your Estimate

Virtual Machines 1 D2 v3 (2 vCPUs, 8 GB RAM) x 730 Hours (...) Upfront: USD 0.00 Monthly: USD

Virtual Machines

REGION: West US OPERATING SYSTEM: Windows TYPE: (OS Only) TIER: Standard

CATEGORY: All INSTANCE SERIES: All INSTANCE: D2 v3: 2 vCPUs, 8 GB RAM, 50 GB Temporary storage, USD 0.209/hour

Virtual machines 1 x 730 Hours

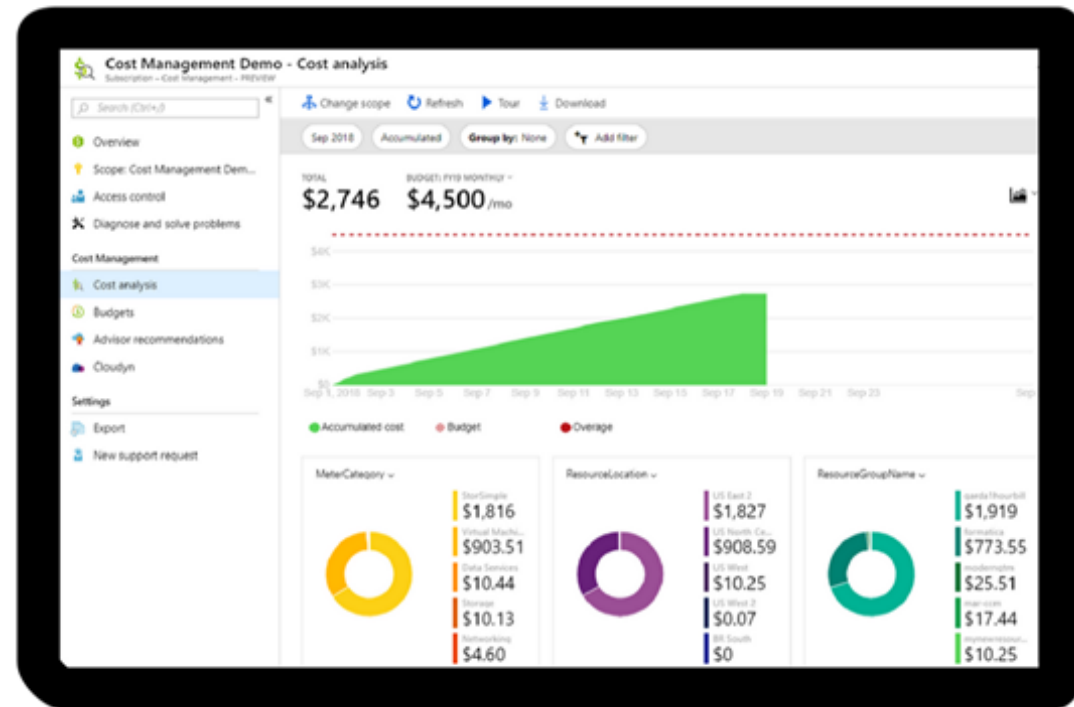

Total Cost of Ownership (TCO) calculator

- A tool to estimate cost savings you can realize by migrating to Azure.
- A report compares the costs of on-premises infrastructures with the costs of using Azure products and services in the cloud.

Azure Cost Management

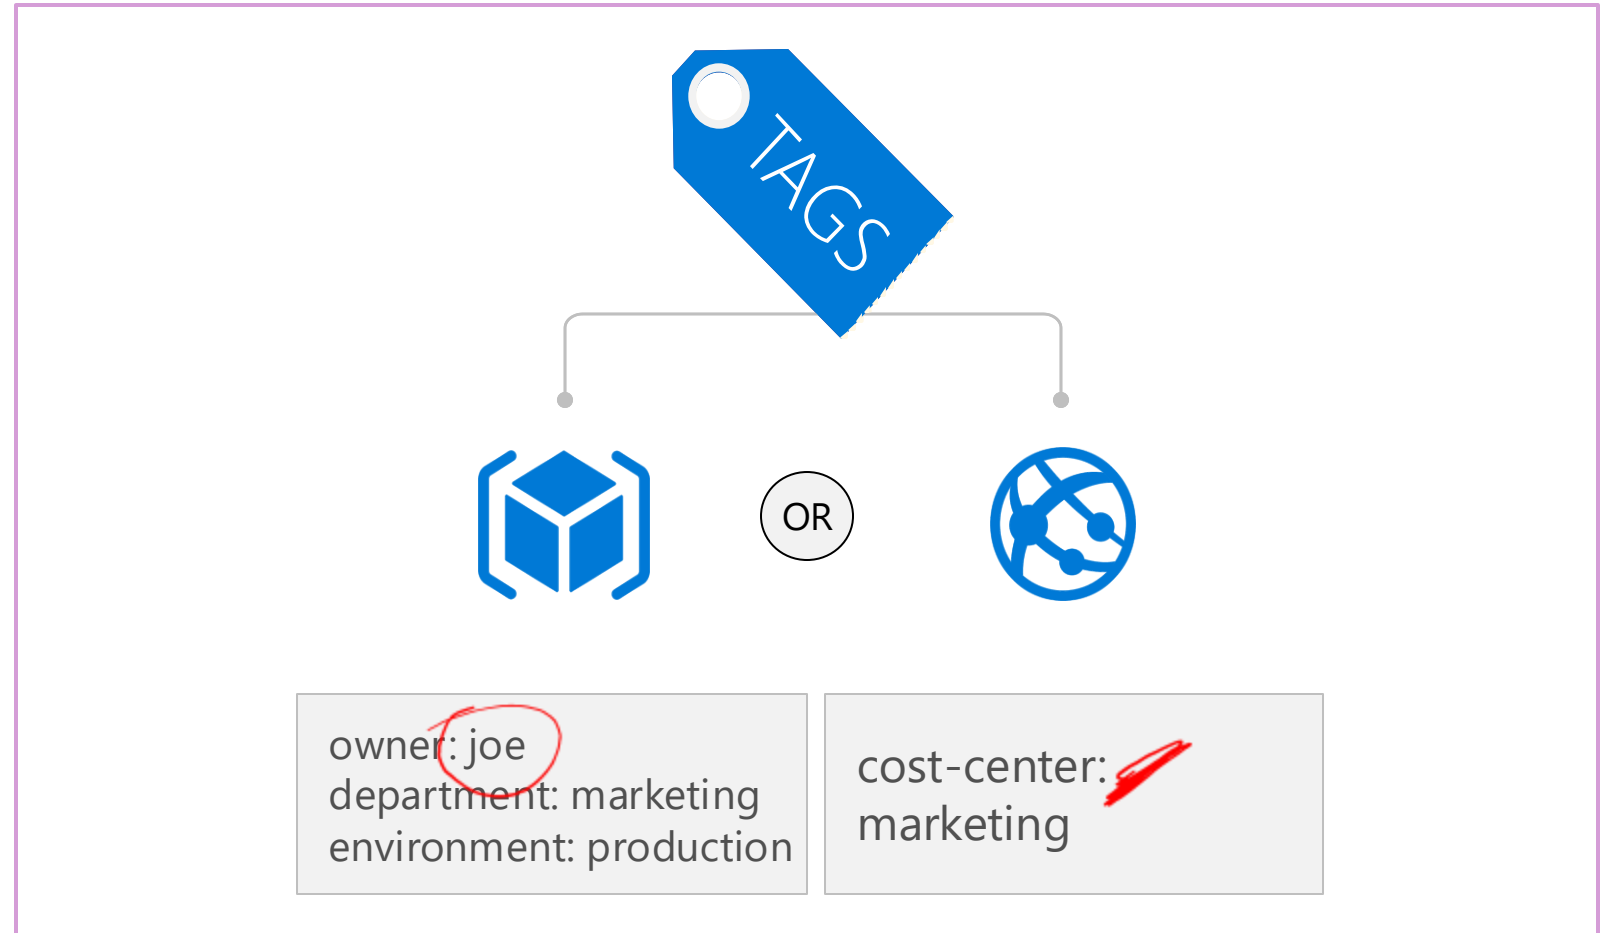

- Reporting: Billing reports
- Data enrichment
- Budgets: Set spend budget
- Alerting: When cost exceed limits
- Recommendation: Cost recommendations

Tags

OE

- Provides metadata for your Azure resources.
- Logically organizes resources into a taxonomy.
- Consists of a name-value pair.
- Very useful for rolling up billing information.

Governance and compliance

Azure Policy

Azure Policy helps to enforce organizational standards and to assess compliance at scale. Provides governance and resource consistency with regulatory compliance, security, cost, and management.

- Evaluates and identifies Azure resources that do not comply with your policies.
- Provides built-in policy and initiative definitions, under categories such as Storage, Networking, Compute, Security Center, and Monitoring.

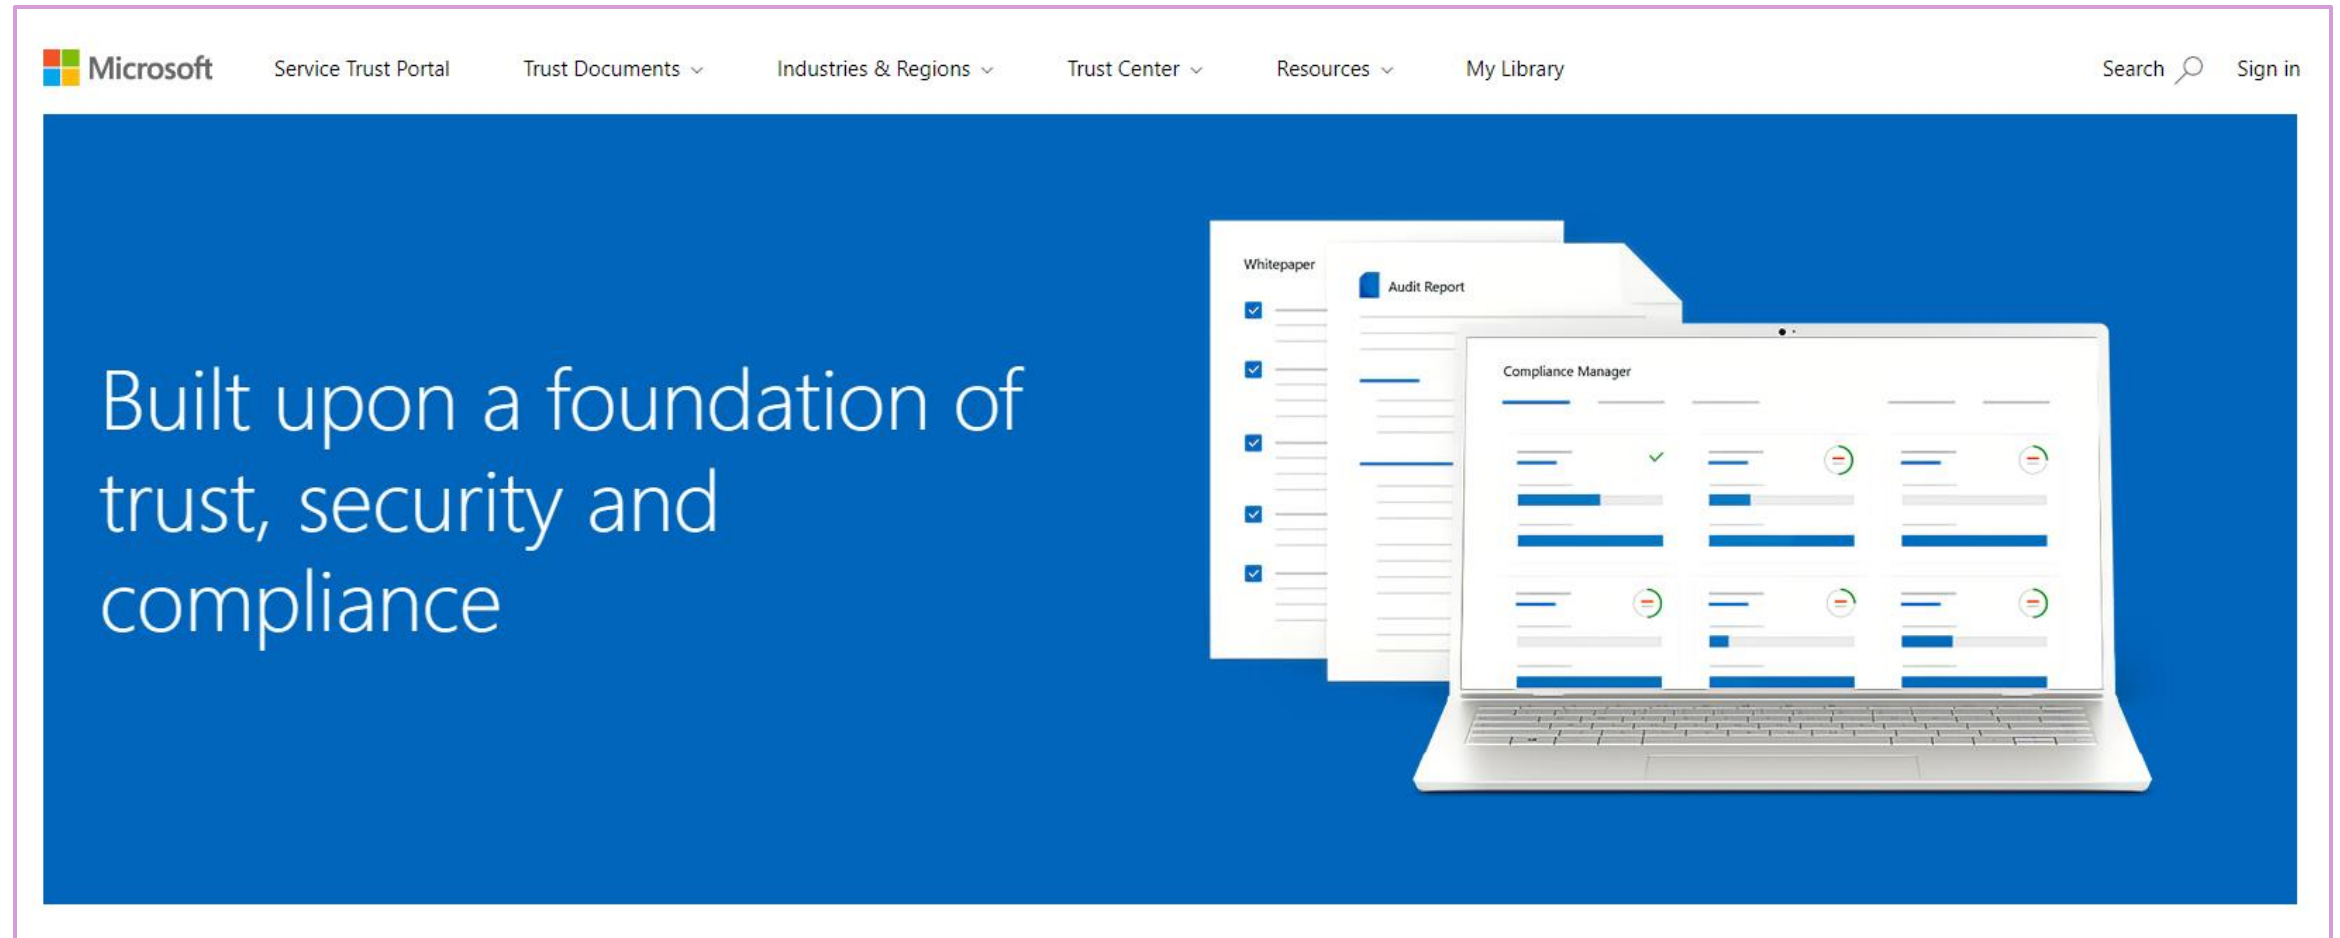

Resource locks

- Protect your Azure resources from accidental deletion or modification.
- Manage locks at subscription, resource group, or individual resource levels within the Azure portal.

Lock Types	Read	Update	Delete
Delete	Yes	Yes	No
ReadOnly	Yes	No	No

Service Trust portal

Microsoft Purview

Microsoft Purview is a family of data governance, risk, and compliance solutions that helps you get a single, unified view into your data. Microsoft Purview brings insights about your on-premises, multicloud, and software as a service data together.

- Automated data discovery
- Sensitive data classification
- End-to-end data lineage

Management and deployment tools

Tools for interacting with Azure

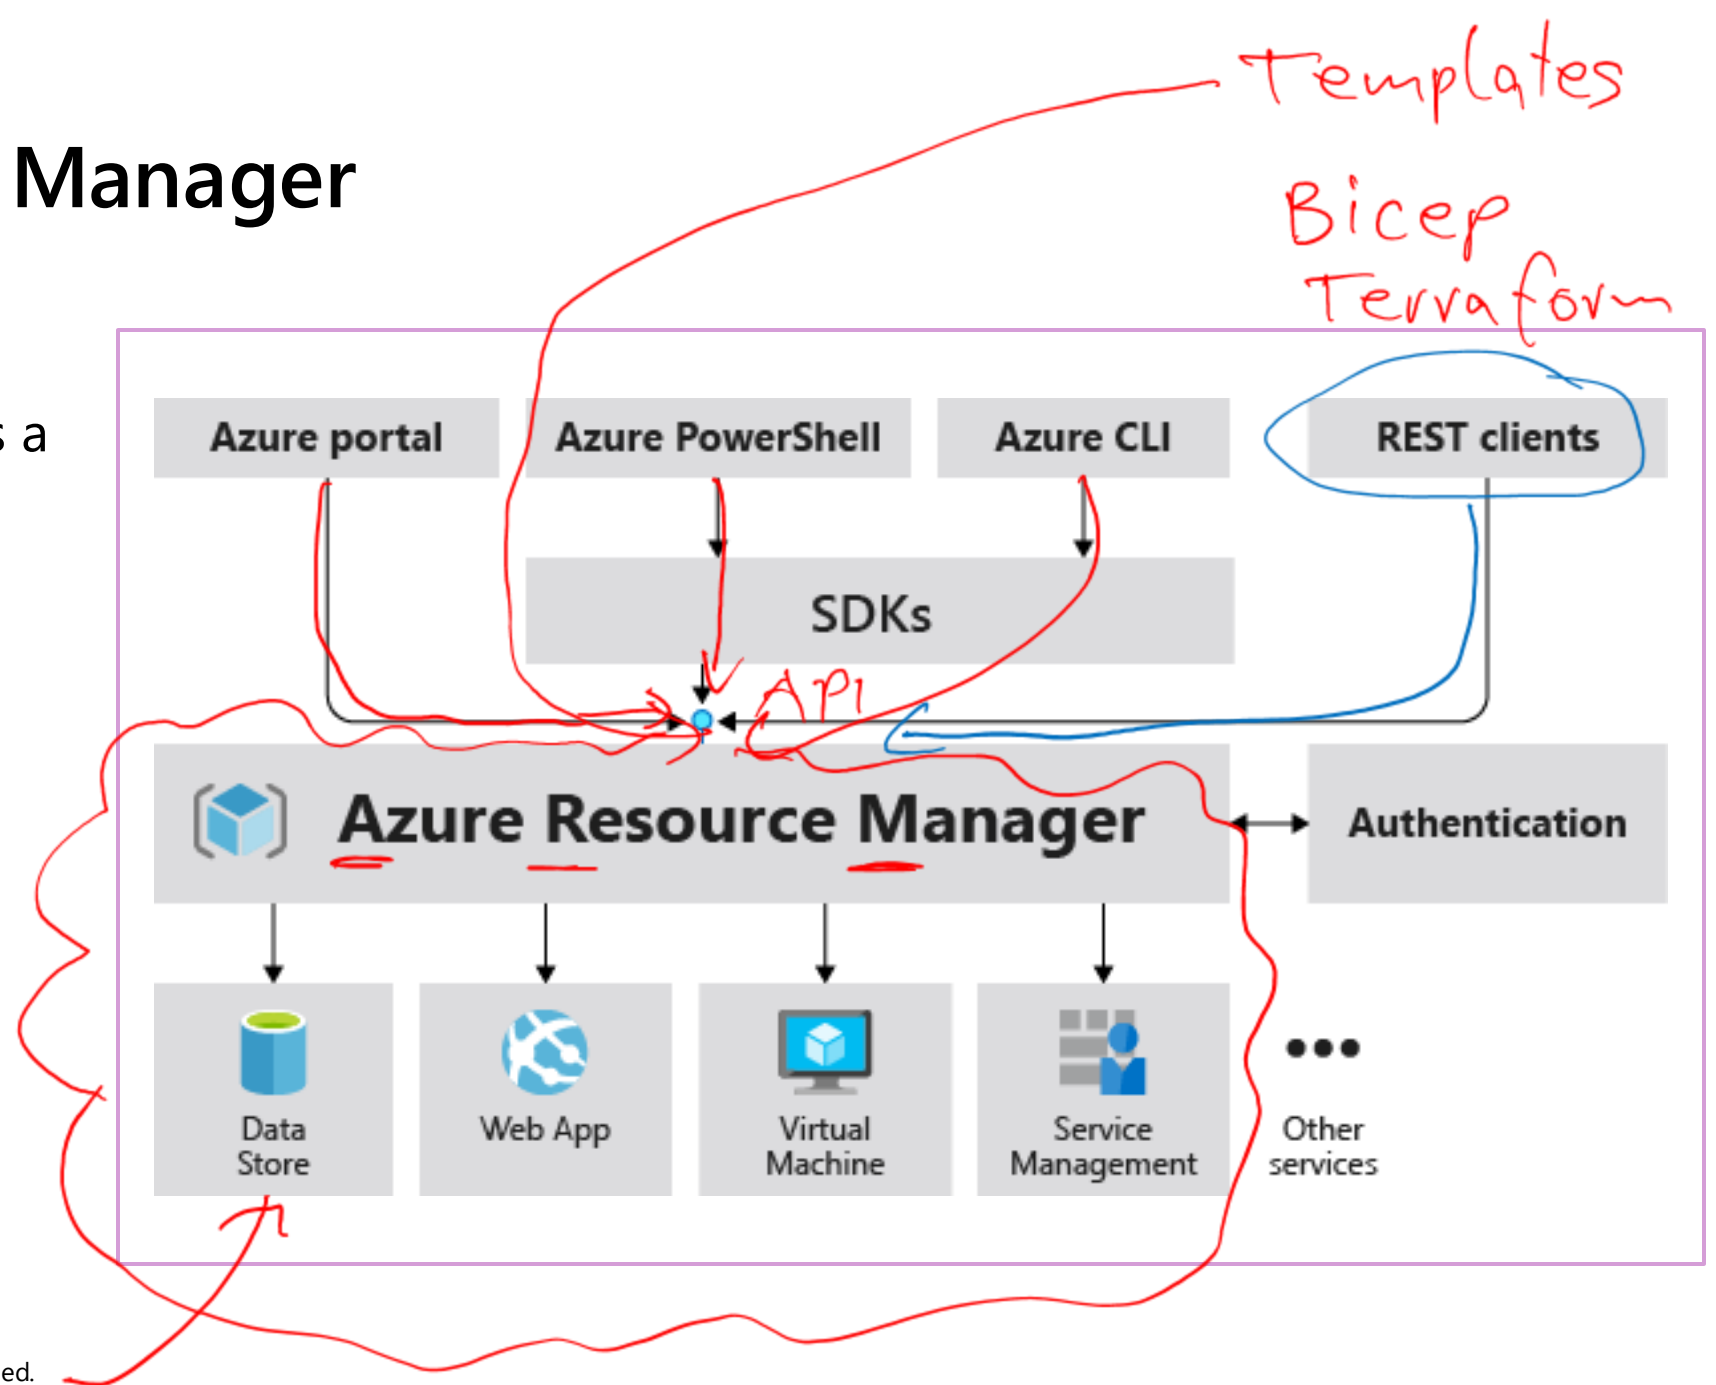

Azure Arc

Azure Resource Manager

The **Azure Resource Manager (ARM)** provides a management layer that enables you to create, update, and delete resources in your Azure subscription.

Infrastructure as code

Semper idem!
idempotent

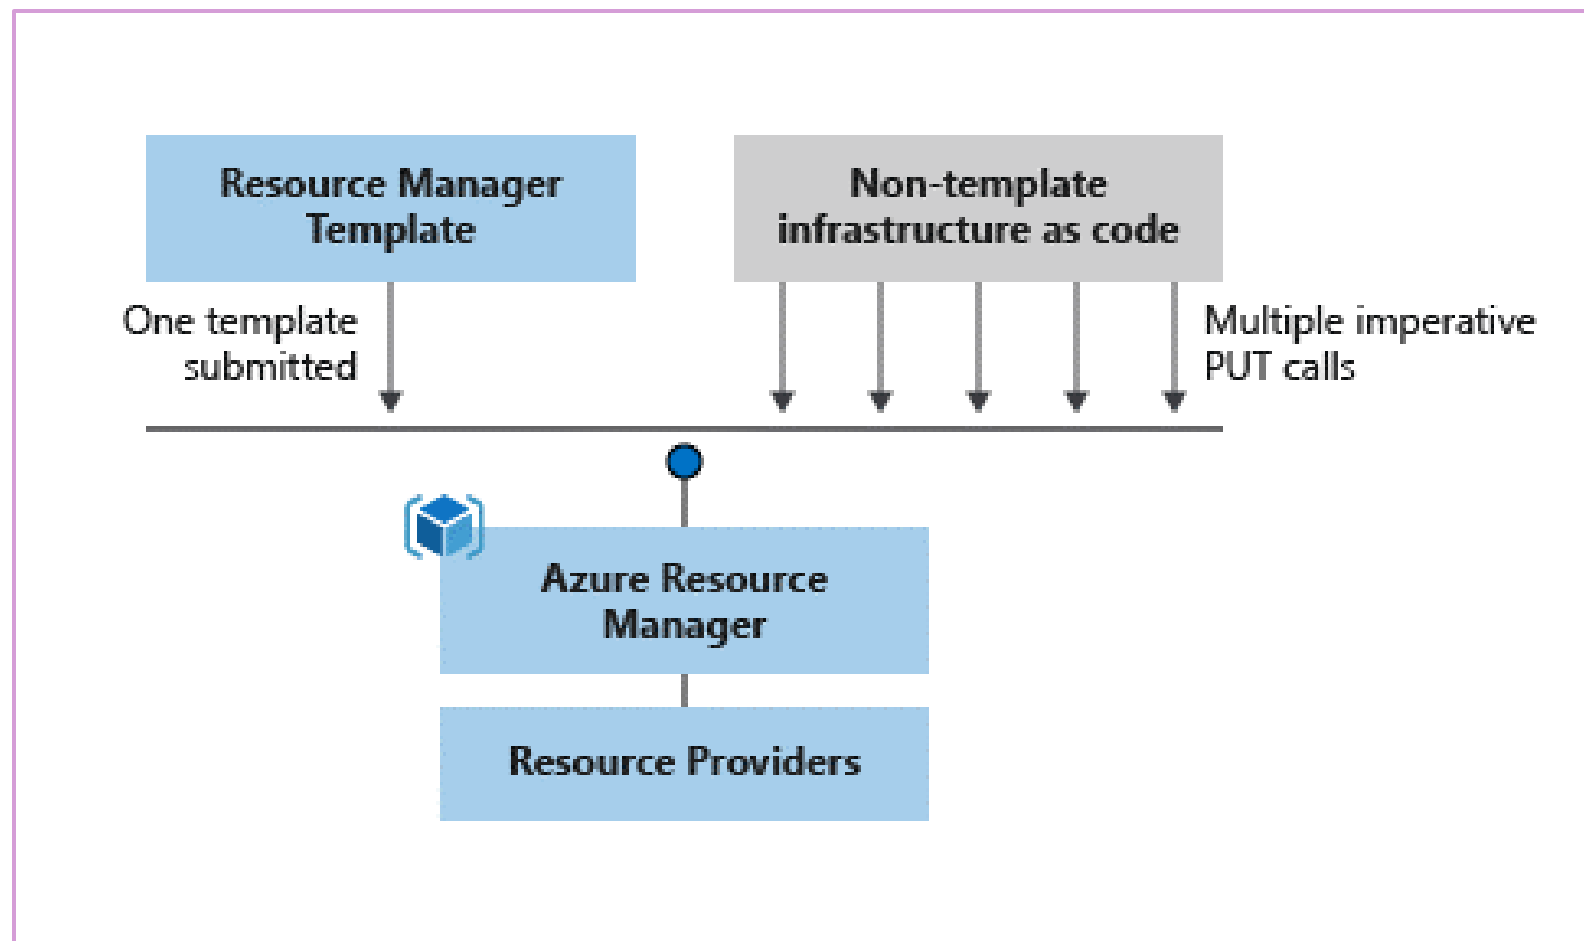

- Ensure consistency in deployment across your cloud ecosystem.
- Manage configuration at scale.
- Rapidly provision additional environments based on a standard configuration and build.

Azure Resource Manager (ARM) templates

Azure Resource Manager (ARM) templates are JavaScript Object Notation (JSON) files that can be used to create and deploy Azure infrastructure without having to write programming commands.

- Declarative syntax
- Repeatable results
- Orchestration
- Modular files
- Built-in validation
- Exportable code

Bicep

JSON

Portal

PS

CLI

ARM
API

Bicep

```
param location string = resourceGroup().location
param storageAccountName string = 'toylaunch${uniqueString(resourceGroup().id)}'

resource storageAccount 'Microsoft.Storage/storageAccounts@2021-06-01' = {
  name: storageAccountName
  location: location
  sku: {
    name: 'Standard_LRS'
  }
  kind: 'StorageV2'
  properties: {
    accessTier: 'Hot'
  }
}
```

New-AzResourceGroupDeployment

az deployment group create

Azure monitoring tools

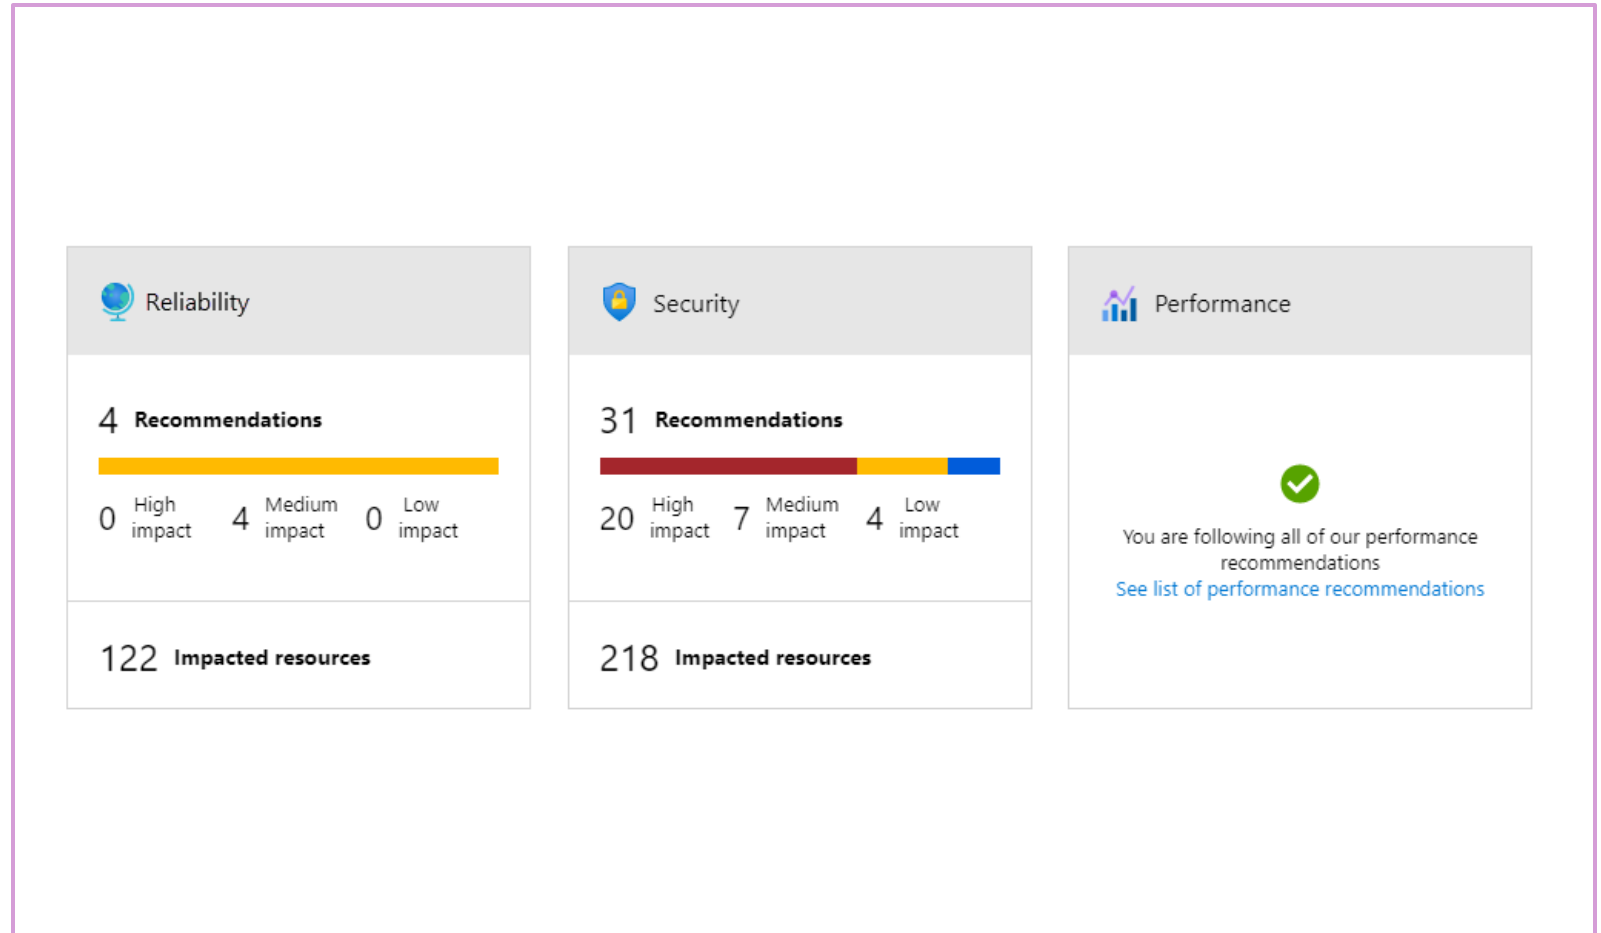

Azure Advisor

Azure Advisor analyzes deployed Azure resources and makes recommendations based on best practices to optimize Azure deployments.

- Reliability
- Security
- Performance
- Cost
- Operational excellence

Azure Service Health

Azure Service Health is a collection of services that keep you informed of general Azure status, service status that may impact you, and specific resource status that is affecting you.

Azure Status: Global view of the health of all Azure services across all Azure regions.

Service Health: Focused view on only the services and regions that you're using. If a service is experiencing a problem in a region you're not using, it won't show up here.

Resource Health: Tailored view of your actual Azure resources. It provides information about the health of your individual cloud resources.

Azure Monitor

Azure Monitor maximizes the availability and performance of applications and services by collecting, analyzing, and acting on telemetry from cloud and on-premises environments.

- Application Insights
- Log Analytics
- Smart alerts
- Automation actions
- Customized dashboards
