# Learning Path 03: Management and Governance

# Learning path 03—outline

You will learn the following concepts:

## 1 Cost management

- Cost and pricing calculators
- Cost management and tags

## 2 Governance and compliance

- ~~Blueprints, policies, and resource locks~~
- Service Trust portal

## 3 Resource deployment tools

- Portal, PowerShell, CLI, and others
- Azure Arc and Azure Resource Manager

## 4 Monitoring tools

- Azure Advisor, Azure Service Health, and Azure Monitor

# Cost management

# Factors affecting costs (part 1)

These are some of the factors affecting costs:

1) Resource type	2) Consumption	3) Maintenance
Costs are resource-specific, so the usage that a meter tracks and the number of meters associated with a resource, depend on the resource type.	With a pay-as-you-go model, consumption is one of the biggest drivers of costs.	Monitoring your Azure footprint and maintaining your environment can help you identify and mitigate costs that aren't necessary, such as shutting down underused virtual machines.

# Factors affecting costs (part 2)

These are some of the factors affecting costs:

4) Geography	5) Network traffic	6) Subscription
The same resource type can cost different amounts depending on the geographic area, which has an impact on Azure costs.	While some inbound data transfers are free, the cost for outbound data or data between Azure resources is impacted by billing zones.	The type and configuration of your subscription can also impact your cost. For example, the free trial lets you explore some Azure resources for free.

# Explore Azure Marketplace

**Azure Marketplace** allows customers to find, try, purchase, and provision applications and services from hundreds of leading service providers, which are all certified to run on Azure.

- Open-source container platforms.
- Virtual machine and database images.
- Application build and deployment software.
- Developer tools.
- And much more, with 10,000-plus listings!

# Pricing calculator

The **pricing calculator** is a tool that helps you estimate the cost of Azure products. The options that you can configure in the pricing calculator vary between products, but basic configuration options include:

- Region
- Tier
- Billing options
- Support options
- Programs and offers
- Azure dev/test pricing

Your Estimate

Virtual Machines      Upfront: USD 0.00      Monthly: USD

Virtual Machines			
REGION:	OPERATING SYSTEM:	TYPE:	TIER:
West US	Windows	(OS Only)	Standard
CATEGORY:	INSTANCE SERIES:	INSTANCE:	
All	All	D2 v3: 2 vCPUs, 8 GB RAM, 50 GB Temporary storage, USD 0.209/hour	
Virtual machines			
1	x	730	Hours

# Total Cost of Ownership (TCO) calculator

- A tool to estimate cost savings you can realize by migrating to Azure.
- A report compares the costs of on-premises infrastructures with the costs of using Azure products and services in the cloud.

# Azure Cost Management

- Reporting: Billing reports
- Data enrichment
- Budgets: Set spend budget
- Alerting: When cost exceed limits
- Recommendation: Cost recommendations

# Tags

- Provides metadata for your Azure resources.
- Logically organizes resources into a taxonomy.
- Consists of a name-value pair.
- Very useful for rolling up billing information.

# Governance and compliance

# Azure Policy

**Azure Policy** helps to enforce organizational standards and to assess compliance at scale. Provides governance and resource consistency with regulatory compliance, security, cost, and management.

- Evaluates and identifies Azure resources that do not comply with your policies.
- Provides built-in policy and initiative definitions, under categories such as Storage, Networking, Compute, Security Center, and Monitoring.

# Resource locks

- Protect your Azure resources from accidental deletion or modification.
- Manage locks at subscription, resource group, or individual resource levels within the Azure portal.

Lock Types	Read	Update	Delete
Delete	Yes	Yes	No
ReadOnly	Yes	No	No

# Service Trust portal

Microsoft Service Trust Portal Trust Documents Industries & Regions Trust Center Resources My Library Search Sign in

Built upon a foundation of trust, security and compliance

The image shows a screenshot of the Microsoft Service Trust portal. At the top, there's a navigation bar with links for Microsoft, Service Trust Portal, Trust Documents, Industries & Regions, Trust Center, Resources, My Library, a search bar, and a sign-in link. Below the navigation is a large blue background area containing white text. On the left, it says 'Built upon a foundation of trust, security and compliance'. To the right, there's a graphic of a laptop displaying a user interface with three main components: a 'Whitepaper' document showing a checklist with several items checked, an 'Audit Report' document, and a 'Compliance Manager' dashboard with a grid of status indicators (green checkmarks, red error symbols, and grey neutral symbols) across multiple rows and columns.

# Microsoft Purview

**Microsoft Purview** is a family of data governance, risk, and compliance solutions that helps you get a single, unified view into your data. Microsoft Purview brings insights about your on-premises, multicloud, and software as a service data together.

- Automated data discovery
- Sensitive data classification
- End-to-end data lineage

# Management and deployment tools

# Tools for interacting with Azure

Jeff Snover  
PowerShell

# Azure Arc

# Azure Resource Manager

The **Azure Resource Manager (ARM)** provides a management layer that enables you to create, update, and delete resources in your Azure subscription.

# Infrastructure as code

Bicep  
Format → json  
Format → ARM

- Ensure consistency in deployment across your cloud ecosystem.
- Manage configuration at scale.
- Rapidly provision additional environments based on a standard configuration and build.

# Azure Resource Manager (ARM) templates

**Azure Resource Manager (ARM)** templates are JavaScript Object Notation (JSON) files that can be used to create and deploy Azure infrastructure without having to write programming commands.

- Declarative syntax
- Repeatable results
- Orchestration
- Modular files
- Built-in validation
- Exportable code

# Bicep

Bicep

```
param location string = resourceGroup().location
param storageAccountName string = 'toylaunch${uniqueString(resourceGroup().id)}'

resource storageAccount 'Microsoft.Storage/storageAccounts@2021-06-01' = {
    name: storageAccountName
    location: location
    sku: {
        name: 'Standard_LRS'
    }
    kind: 'StorageV2'
    properties: {
        accessTier: 'Hot'
    }
}
```

# Azure monitoring tools

# Azure Advisor

**Azure Advisor** analyzes deployed Azure resources and makes recommendations based on best practices to optimize Azure deployments.

- Reliability
- Security
- Performance
- Cost
- Operational excellence

# Azure Service Health

Azure Service Health is a collection of services that keep you informed of general Azure status, service status that may impact you, and specific resource status that is affecting you.

**Azure Status:** Global view of the health of all Azure services across all Azure regions.

**Service Health:** Focused view on only the services and regions that you're using. If a service is experiencing a problem in a region you're not using, it won't show up here.

**Resource Health:** Tailored view of your actual Azure resources. It provides information about the health of your individual cloud resources.

# Azure Monitor

**Azure Monitor** maximizes the availability and performance of applications and services by collecting, analyzing, and acting on telemetry from cloud and on-premises environments.

- Application Insights
- Log Analytics
- Smart alerts
- Automation actions
- Customized dashboards

# Learning path 03 review

## Microsoft Learn Modules ([learn.microsoft.com/training](https://learn.microsoft.com/training))

- Cost management
- Governance and compliance
- Resource deployment tools
- Monitoring tools
